

Product Grading Rules Performance

Grade Selection

The purpose of this document is to provide a simplified but thorough explanation of the grading rules of TIMBRA Tech hardwood Thermally modified products.

TIMBRA Tech Benchmark products undergo intense thermal modification. It makes the PERFORMANCE selection exceptionally durable (Class 2) and stable while emphasizing its warm dark-brown colour.

Grade selection and specification will have a significant impact on both the appearance and performance of wood products in any given application. When thermally modified hardwoods are specified or purchased without clearly defining grade expectations, there is no assurance of the quality and consistency of the product delivered, and no accountability standard set for the supplier. And since grade affects price, what looks like a good deal on paper might not look nearly as good on your project. If the product is being used in structural applications like decking, grade has a direct impact on mechanical properties and load performance.

In the absence of industry established and defined quality control standards for thermally modified hardwood, cladding, decking and lumber **TIMBRA Tech** has developed and published grading standards and product specification language which we apply to our production.

TIMBRA Tech has created this guide to assist clients and end users in determining grade expectations and value requirements as well as to understand some of the common grades that might be encountered in the market. We strongly encourage clients and consumers to utilize these standards in their decision making process and to specifically reference these standards in their purchase orders.

Grading Rule Definitions

As with most natural wood products, Thermally Modified hardwoods possess natural "Appearance Characteristics" that add to their unique beauty.

Those that are appreciated include colour variation and distinctive grain patterns. Other characteristics in all types of lumber that develop naturally or through manufacturing are known as "Physical Characteristics", "Sound Defects", Unsound Defects and "Milling Defects".

The grading of Decking into categories as it is processed by **TIMBRA Tech** to determine to a large extent the value and potential use possible for each board. The following is a summary of the typical characteristics one might find in a wood grade specification.

It is important to note that industry standard allows for 5% sub grade in all production to allow for human error in the grading process.

Characteristics

Appearance

- 1. Color Variation
- 2. Mixed Grain
- 3. Drying Checks
- 4. Reverse Grain
- 5. Birdseve
- 6. Pin Knots
- 7. Water Stain

Physic

- 8. Discoloration9. Sticker Marks
- 10. Molder Knife Marks

Physical

- 1. Bow
- 2. Crook
- 3. Cup
- 4. Twist

Defects

Milling

- 1. Hit or Miss/Skip
- 2. Torn grain
- 3. Non-compliant profiling

Sound

- 1. Pin holes
- 2. Sound knots

Unsound

- 1. Large borer holes
- 2. Splits
- 3. Unsound knots
- 4. Shake
- 5. Sapwood

GRADED BY		
	BETTER FACE	BACK FACE
HIT & MISS	Not allowed	≤30% area
FEED-ROLLER MARKS	Not allowed	≤40% area
WANE	Not allowed	Max 1/5 of width and 1/3 of the thickness of the board
MECHANICAL DEFECTS	Not allowed	Unlimited
SURFACE CHECKS	Up to 2 mm wide and 50 mm long	Unlimited
SHAKES	Not allowed	
RING SHAKES	Not allowed	
END SPLITS	Up to 40 mm	Unlimited
KNOT HOLE	Not allowed	
BARK KNOTS	Not allowed	Unlimited

GRADED BY		BETTER FACE	BACK FACE
DEAD KNOTS/ BLACK KNOTS		Not allowed	Unlimited
UNSOUND/ BROKEN KNOTS	8	Not allowed	Unlimited
KNOT SHAKE		Not allowed	Unlimited
PIN KNOTS		Up to Ø 10 mm	Unlimited
ARRIS KNOTS		Not allowed	Unlimited
EDGE KNOTS	E	Not allowed	Unlimited
KNOT CLUSTER		Not allowed	Unlimited
Partially Intergrown Knots		Not allowed	Unlimited
SCAR		Up to 200 mm²	Unlimited
MINERAL DEPOSITS ABSORBED FROM THE SOIL		Unlimited	Unlimited

GRADED BY		
	BETTER FACE	BACK FACE
PITH	Not allowed	Unlimited
BARK/ROT/ MOULD	Not allowed	
INSECT HOLES	Not allowed	Unlimited
GLASS WORN MARKS	Unlimited	
STICK MARKS	Not allowed	≤20% area
CUP	Allowed up to 1% of the width of the board	
TWIST	Allowed up to 5% of board width per meter in length, has to be reversible during installation	
BOW	Allowed up to 3 mm per meter in length	
SPRING CROOK	Allowed up to 8,5 mm per meter in length	
TOLERANCES	Thickness: +/- 0,5 mm Width: +/- 1 mm Length: +/- 1 mm per meter in length	

All defects that are allowed on the back face and not limited by size, are tolerated to the extent that they will not jeopardize the integrity, usability, and visual wholeness of the installed product.
